Fragmented Workflows & Backend Bottlenecks

Context Switching

Developers waste 30% of their day jumping between project managers, GitHub, and Code Editors.

Tool Fatigue

Existing tools are siloed. They track work, but they don't do the work.

Infrastructure Overhead

Traditional SaaS architectures demand heavy backend servers and databases, making deployment costly and slow.

Meridian: The AI-First Unified Hub

Agentic Intelligence
AI assistant (AMD cloud) reads context (sprints, PR diffs) to unblock developers.

All-in-One Interface
Sprints, PRs, Sandbox, and Docs in one ultra-fast interface.

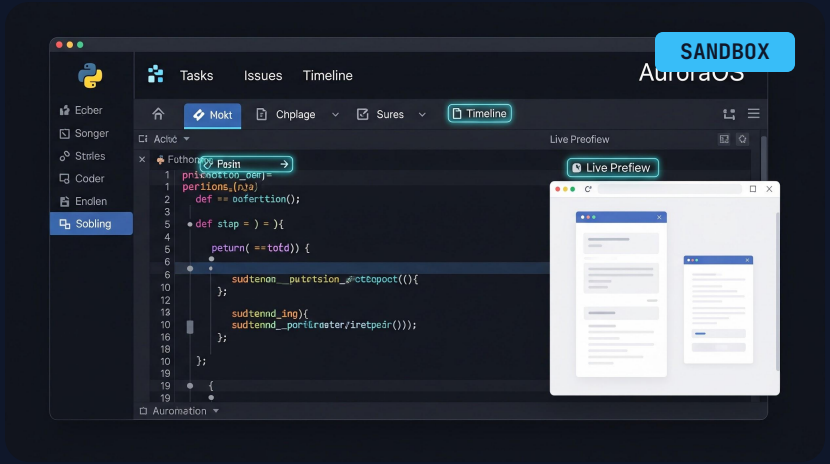
Why Not Just Use Linear?

Beyond Simple Issue Tracking

The Problem: Linear tells you what to do (the "what"), but requires you to switch tools to execute.

The Meridian Shift: Features a fully functional, in-browser code sandbox for HTML/CSS/JS.

Native AI Action: AI acts as a pair-programmer, analyzing sandbox code to auto-generate PRs in seconds.



VS. TRADITIONAL: Stop context switching. Write, run, and test code without ever leaving your workspace.

Context-Aware Agentic Intelligence

Sprint & PR Analyst

One click to summarize blocking issues, pull request risks, or long documentation.

AI Pull Request Generator

Write code in the sandbox and let AI generate a perfect PR title and description instantly.

Seamless Integrations

Connects with GitHub, Jira, Figma, and Sentry as the ultimate source of truth.

Why AMD: The Strategic Exclusive Edge

STRATEGY: Disruption via Instinct™ & ROCm™ Exclusivity

AMD Hardware Exclusivity

Engineered specifically for MI300X, creating a captive ecosystem that incentivizes AMD adoption over competitors.

White-Label Platform Licensing

AMD provides platform access for partners like Azure, allowing them to offer this unified developer experience atop their own AMD-powered hardware.

Professional Workflow Moat

A mission-critical tool for developers that only runs on ROCm™, turning hardware into an essential service for professional teams.
